

# PROTECTIVE SCREEN FOR DRIVERS

We have optimal methacrylate protection screens for the division and protection in vehicles against possible virus infections. Whatever the size of the vehicle, the screen is adapted to the width of the vehicle, without the use of tools for its installation, since its system of flange mooring allows its total fixing and immobilisation. In this way, extra hygiene protection is guaranteed within cars, thus allowing more passengers to move within them.

Suitable for taxis, VTC, vans, etc. Its design is fully transparent, offering clear visibility between the driver and passengers.

Nylon flanges are included.

Delivery time approx. 48 h.
