

# REGISTERED LASHING SYSTEM FOR ELECTRICAL CABINETS

**360** **ECO**<sup>®</sup>  
**PACKAGING**

Our registered system of internal lashing in the packaging, allows to fix the cabinet quickly and efficiently by integrating the immobilization elements in the base of the box. These integrated immobilization devices can be: **straps, ratchets, screws, straps, etc.**

Thanks to this system, unnecessary packaging aids such as pallets, supports, blocks, etc. are eliminated, thus optimizing the weight and internal volume, which reduces logistics and transportation costs.

This packaging is ISPM 15 certified for international trade.

## ADVANTAGES

- ☛ Savings of approximately 33% of the cost of the box. By replacing the original base, the cost can be borne by the regular supplier.
- ☛ Savings in logistics and transportation costs by optimizing packaging dimensions and weight, especially in air shipments.
- ☛ Savings in packaging time and costs of packaging auxiliaries.
